                    <option value="wednesday"
selected="selected">Wednesday</option>
                    <option value="thursday">Thursday</option>
                </select>
            </label>
        </p>
        <p>To select multiple days drag over the days, to
select alternate days Ctrl-click on the days you are
available. </p>
        <p>How do you prefer to be contacted?<br />
        </p>
        <p>
            <label>
                <select name="contact" id="contact">
                    <option value="phone">Phone</option>
                    <option value="email">E-mail</option>
                    <option value="post">post</option>
                </select>
            </label>
        </p>
        <p>
            <label>
                <input type="submit" name="button" id="button"
value="Send " />
            </label>
            <label>
                <input type="reset" name="button2" id="button2"
value="Reset" />
            </label>
            <br />
        </p>
        <p><strong>Privacy Policy</strong>: the information you
provide will not be shared it is only for the use in our
selection of potential employees. </p>

</form>

```

PHP Script for basic form

```
<?php

    // validate each of the variables in the form

    $name = $_POST['name'];
    $hiddenField = $_POST['hiddenField'];
    $email = $_POST['email'];
    $age = $_POST['age'];
    $job = $_POST['job'];
    $address = $_POST['address'];
    $languages1 = $_POST['languages1'];
    $languages2 = $_POST['languages2'];
    $languages3 = $_POST['languages3'];
    $daysavailable = $_POST['daysavailable'];
    $contact = $_POST['contact'];

    // add date the form was submitted
    $date = gmdate("M d Y");

    // Thank the user
    print "<center><b><p>Thank you $name we will get back to you shortly</p></b></center>";
    print "<center>$date</center>";

    // Send to specified email address
    $to = "rberdan@scienceandart.org";
    $subject = "Job Application form";
    $body = " Date: $date \n Name: $name \n hiddenField: $hiddenField \n Email address:
    $email \n Age: $age \n Job: $job \n Address: $address \n Languages: $languages1
    $languages2 $languages3 \n Days available: $daysavailable[0] $daysavailable[1]
    $daysavailable[2] $daysavailable[4] \n Contact: $contact \n\n";
    mail($to,$subject,$body);

?>
```

Output to email should look like this

```
:
```
